

The AI stack I build with

Every tool, app and GitHub repo from my AI tools session, from the terminal I work in to the servers my agents run on. Every name is a link.

Free community: [AI Automation Insiders on Skool](#) Premium: [20% off AI Automation Insiders](#) with code **AISTACK**

The tools

The apps and services I use every day, grouped by the job they do.

WHERE THE WORK HAPPENS

cmux

cmux.com

Free, open-source terminal for running many Claude Code sessions across projects. It flags the ones waiting on you.

Claude Code

claude.com

The agent that does the building. Run it in a terminal, where it can take on long, complicated jobs.

Codex app

openai.com/codex

OpenAI's coding app. I use it for browser automation, image generation and a second opinion on every plan.

Grok

grok.com

xAI's model. A third reviewer in consensus planning, so no single model grades its own work.

Glaido

glaido.com

Dictation that works in every app, the terminal included. Hold one key, talk, and it learns your product names.

Logitech MX Master 4

logitech.com

Programmable buttons and an action ring for screenshots, dictation and custom commands.

BUILD, HOST AND STORE

GitHub

github.com

Where the code lives. Also a knowledge base, and a feed of what other builders are shipping.

Supabase

supabase.com

Database, logins and file storage for every app. Each project gets its own.

Vercel

vercel.com

Hosts the front end. Connect a repo and a domain and every push goes live, with bot blocking built in.

Doppler

doppler.com

One home for every API key, shared across projects and agents so nothing gets pasted into chat or pushed to GitHub.

Hetzner

hetzner.com

Cheap, reliable virtual servers. Give Claude Code an API key and it builds and manages them for you.

Cloudflare

cloudflare.com

Workers for background jobs and R2 for cheap file storage.

Amazon SES

aws.amazon.com

Sends email from clean, managed IPs. I route GoHighLevel email through it to stay out of spam.

Obsidian

obsidian.md

Notes stored as plain files, organized in a way AI can read.

CONNECT YOUR TOOLS

Composio

composio.dev

One connection for Gmail, Calendar, Notion, Slack and the rest, with a free CLI for Claude Code and your agent.

Unipile

unipile.com

Instagram and LinkedIn DMs and comments through an API, for the jobs Composio can't do.

Apify affiliate

apify.com

Ready-made scrapers for YouTube, TikTok, Instagram and most lead sources. Check here before building one.

GoHighLevel affiliate

gohighlevel.com

The CRM. I run it from the terminal through a custom CLI instead of clicking around.

Skool affiliate

skool.com

The community platform. Lessons and comment replies go out from Claude Code.

DESIGN THAT DOESN'T LOOK AI-MADE

Claude Design

claude.ai/design

Build a design system (fonts, colors, buttons, icons) and hand it to Claude Code so every page matches.

21st.dev affiliate

21st.dev

A marketplace of website components. Save the ones you like and Claude Code builds from your library.

VIDEO, VOICE AND IMAGES

HeyGen affiliate

heygen.com

AI avatars. Avatar 5 matches your intonation and hand movements. I use it for demo videos.

ElevenLabs affiliate

elevenlabs.io

Professional voice clone. Link it to HeyGen, then tune speed, stability and style.

fal.ai

fal.ai

Image, video and voice models through one API, at the price the model maker charges.

Higgsfield affiliate

higgsfield.ai

Video generation with a creative director and prompt tools on top. Give Seedance reference images for the best results.

Tella affiliate

tella.tv

Screen and camera recorder. My coaching calls are recorded here.

FFmpeg

ffmpeg.org

Stitches clips together. Almost every AI video workflow needs it installed.

AI AGENTS

Viktor affiliate

getviktor.com

An AI agent that lives in Slack. The fastest start if your team already works there.

Photon

photon.codes

Gives your agent an iMessage number. The free plan covers it, and you don't need a Mac Mini.

Bland AI

bland.ai

AI phone calls. Give it a goal instead of a script and it makes the call.

SKILLS AND CLIS I BUILT

Ultraskill

leadgenjay.com/skills

Grades a skill's output, fixes the skill, and runs it again until the output is good.

Reeper

leadgenjay.com/skills

Merges a public repo or skill into your setup, and interviews you about conflicts first.

Hyper Carousel

leadgenjay.com/skills

Animated Instagram carousels built with HyperFrames, one MP4 per slide.

Skool CLI

leadgenjay.com/systems

Skool has no public API. Your agent posts, answers comments and adds lessons, and nothing goes out until you say so.

Clay CLI

leadgenjay.com/systems

Your agent builds the Clay table, loads your leads and adds enrichment columns, and asks before it spends credits.

GoHighLevel CLI

leadgenjay.com/systems

Build workflows, smart lists, email campaigns and funnels in GoHighLevel from the terminal.

The GitHub repos

Free, public repos you can hand to Claude Code. Check each license before commercial use.

DESIGN

Impeccable

pbkaus/impeccable

A design vocabulary and set of commands that help an AI coding agent build and critique interfaces properly.

Taste

Leonxlnx/taste-skill

Rules that stop AI from producing the same generic-looking page every time.

UI/UX Pro Max

nextlevelbuilder/ui-ux-pro-max-skill

A searchable library of UI styles, color palettes, font pairings and UX guidelines for web and mobile.

Vibecoded Design Tells

JCarterJohnson/vibecoded-design-tells

3.2 million Reddit posts ranked into the visual habits that make a site look AI-built, with the raw data.

Vercel Agent Skills

vercel-labs/agent-skills

Vercel's official skills, including React best practices and a web design guidelines review.

AGENTS AND CLAUDE CODE PLUGINS

Hermes Agent

NousResearch/hermes-agent

Nous Research's open-source agent that keeps long-term memory and builds new skills as it works.

oh-my-claudecode

Yeachan-Heo/oh-my-claudecode

Adds planner, executor and reviewer agents to Claude Code and lets them work as a team.

Claude Code Plugins

anthropics/claude-plugins-official

Anthropic's own curated directory of Claude Code plugins.

Codex for Claude Code

openai/codex-plugin-cc

Hands a code review or a coding task from Claude Code over to OpenAI's Codex.

Grok Build for Claude Code

xai-org/grok-build-plugin-cc

Sends reviews and stuck tasks from Claude Code to xAI's Grok Build CLI.

CLI-Anything

HKUDS/CLI-Anything

Builds a command-line interface for existing software so an agent can operate it.

VIDEO

HyperFrames

heygen-com/hyperframes

Write HTML, render video. Built for agents, and what I use now for animations and captions.

Remotion

remotion-dev/remotion

Make videos with React code. The other open-source option your agent can drive.

AI CEO Video Editing Starter

drleadflow/aiceo-video-editing-starter

Ameca's workflow for Codex and HyperFrames: clean cuts, two-line hooks and versioned exports.

WRITING, RESEARCH AND DIAGRAMS

Humanizer

blader/humanizer

Strips the phrases and patterns that give text away as AI-written.

Archify

tt-ali/archify

Turns a description into an architecture, workflow or sequence diagram, saved as one HTML file.

last30days

mvanhorn/last30days-skill

Researches a topic across Reddit, X, YouTube, Hacker News and the web from the last 30 days and summarizes what people said.

AUTOMATION AND DATA

n8n

n8n-io/n8n

Workflow automation you can self-host, with 400+ integrations and built-in AI nodes.

Scrapling

D4Vinci/Scrapling

A Python scraping framework that still finds the right elements after a site changes its layout.

Keep learning
